## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Poly(4-Vinylphenol) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Poly(4-vinylphenol) production reached approximately 660 tons, with an average global market price of around US\$ 426 per kg. Poly(4-vinylphenol) is a phenolic polymer obtained by polymerization of 4-vinylphenol. The backbone is a carbon-carbon chain with pendant phenyl groups bearing para-hydroxyl substituents. The high density of phenolic hydroxyl groups provides strong hydrogen bonding, high polarity, and compatibility with diverse substrates. Poly(4-Vinylphenol) is derived from the monomer 4-Vinylphenol, whose synthesis typically involves vinylation of phenolic compounds either via direct reaction of phenol derivatives with ethylene, or via Wittig, Heck coupling, or related routes to introduce a vinyl group onto the phenolic ring. Downstream, Poly(4-Vinylphenol) finds applications due to its hydroxyl functionality: in photoresist materials, photolithography resists, conductive polymer dopants, and as interfacial layers in capacitors.

The global Poly(4-Vinylphenol) market size was estimated at USD 281.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.00% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Poly(4-Vinylphenol) market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
