Abstracts

Polyacrylic elastomers, also known as acrylic elastomers, are a class of synthetic rubber materials derived from acrylic acid or its esters, characterized by their excellent resistance to heat, ozone, and oils?particularly at elevated temperatures?making them suitable for demanding automotive, industrial, and specialty applications where fluorocarbon or silicone elastomers may be cost-prohibitive or technically excessive. These materials exhibit strong aging stability, good weatherability, and moderate mechanical properties, and they are often used in seals, gaskets, hoses, and vibration dampers in environments exposed to hot oils, automotive transmission fluids, or oxidizing conditions.

The global Polyacrylic Elastomers market size was estimated at USD 420.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
