Report Overview

Polyacrylonitrile powder is a pre-spinning polymer of acrylic fiber. It is prepared by free radical polymerization of acrylonitrile. The acrylonitrile units in the macromolecular chain are connected in a connector-tail manner. Mainly used for making polyacrylonitrile fiber, polyacrylonitrile fiber (commonly known as acrylic fiber) strength is not high, wear resistance and fatigue resistance is also poor. Polyacrylonitrile fibers have the advantage of good weather and sun resistance, retaining 77% of their original strength after 18 months outdoors. It is also resistant to chemical reagents, especially inorganic acids, bleach, hydrogen peroxide and general organic reagents.
