Report Overview

Polyamide, commonly known as nylon, is a general term for polymers containing amide groups in the repeating units of the main chain of macromolecules. Polyamide can be obtained by ring opening polymerization of internal acid amine, or by condensation polymerization of binary amine and binary acid. Polyamide (PA) refers to a polymer with a polar amide group (- CO-NH-1) in its main chain segment. Initially used as a raw material for fiber manufacturing, PA has become a widely used engineering plastic in industry due to its strength, wear resistance, self-lubrication, and wide temperature range of use. PA is widely used to replace copper and other advantages, and non-ferrous metals are used to make mechanical, chemical, and electrical parts, such as diesel engine fuel pump gears, water pumps, high-pressure sealing rings, fuel pipelines, etc.
