Abstracts

Polyamide, commonly known as nylon, is a class of synthetic thermoplastic polymers characterized by high mechanical strength, thermal stability, chemical resistance, and excellent wear properties, making it particularly suitable for demanding applications in electric mobility (e-mobility). In this context, polyamide is engineered into various grades?including reinforced, flame-retardant, and thermally conductive formulations?to meet specific performance requirements such as lightweighting, electrical insulation, heat management, and durability. It is utilized in components like battery housings, connectors, charging infrastructure parts, electric motor mounts, and thermal management systems, where its ability to replace metals reduces weight (improving energy efficiency) while maintaining structural integrity and safety under high-voltage and high-temperature conditions. The material?s versatility also allows for design flexibility and integration of functions, supporting the broader shift toward sustainable, efficient electric vehicles and supporting systems.

The global Polyamide In E Mobility market size was estimated at USD 1520.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.30% during the forecast period.
