## Abstracts

Polyamide Thermal Barrier Strips are components made from polyamide 66 (PA66) reinforced with glass fibers, typically containing at least 25% glass fibers content. These strips are designed to be inserted between the inner and outer sections of aluminum frames in windows, doors, and curtain walls, effectively creating a thermal break. This separation significantly reduces thermal conductivity, enhancing the energy efficiency of buildings by minimizing heat transfer through the metal frames. The incorporation of these strips not only improves insulation but also contributes to soundproofing and condensation reduction. Additionally, they allow for dual-color finishing, enabling different interior and exterior aesthetics.

The global Polyamide Thermal Barrier Strip market size was estimated at USD 716.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
