Abstracts

Polyanionic Cellulose (PAC) is a water-soluble polymer derived from cellulose, commonly used in oilfield applications, especially in drilling fluids. It functions as a viscosifier and fluid loss control agent in water-based drilling muds. PAC helps increase the viscosity of drilling fluids, aiding in the suspension of cuttings and improving the efficiency of the drilling process. It also reduces the loss of fluid into porous formations, ensuring wellbore stability and minimizing environmental impact. PAC is effective in a variety of conditions, including high temperatures and salinity, and is essential for enhancing drilling performance, well control, and overall operational efficiency.

The global Polyanionic Cellulose for Oilfield market size was estimated at USD 654.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.40% during the forecast period.
