## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Polyaxial Locking Plate System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The Polyaxial Locking Plate System is an orthopedic implant used for internal fixation of fractures. It consists of a bone plate with tapered threaded holes and screws that can be adjusted and locked in multiple directions within a certain angle range. It forms an internal fixation framework through an "angle stabilization" mechanism and is suitable for periarticular and complex metaphyseal fractures. It offers advantages such as good anatomical fit, reduced periosteal stripping, and promoted healing. The upstream of its industry chain includes medical-grade titanium alloy/stainless steel bars, precision forging and machining equipment, and surface treatment (such as sandblasting and anodizing) service providers. The midstream consists of orthopedic companies with Class III medical device qualifications, such as Daibo Medical, Weigao Orthopedics, and Stryker, which need to master material forming, heat treatment, sterilization validation, and clinical registration capabilities. The downstream mainly targets hospital trauma orthopedic departments, entering clinical use through distributors, GPO centralized procurement, or direct sales. Due to its mature technology but high-value consumable status, the overall gross profit margin of the industry is generally between 55% and 72%. In 2024, the global production of universal locking plate systems was approximately 450,000 units, with an average market price of US\$1,200 per unit. The annual production capacity of a single production line was 20,000 units.

The global Polyaxial Locking Plate System market size was estimated at USD 540.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of

6.10% during the forecast period.
