Report Overview

Polybutene-1 is the result of polymerizing butene-1 with a stereospecific catalyst to create a linear, high isotactic and semicrystalline polymer.

It is important to note that PB-1 is often mistaken for polyisobutene, or PIB, which is an entirely different type of material - a low molecular weight oily liquid.

PB-1, when applied as a pure or reinforced resin, can replace materials like metal, rubber and engineering polymers. It is also used synergistically as a blend element to modify the characteristics of other polyolefins like polypropylene and polyethylene.

Because of its specific properties, it is mainly used in pressure plumbing system, flexible packaging, water heaters, compounding and hot melt adhesives, etc..
