Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Polycarbonate Resin competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Polycarbonates (PC) are a group of thermoplastic polymers containing carbonate groups in their chemical structures. Polycarbonates used in engineering are strong, tough materials, and some grades are optically transparent. They are easily worked, molded, and thermoformed. Because of these properties, polycarbonates find many applications. Polycarbonate (PC) Resin is mainly classified into the following types: phosgene and non-phosgene. Phosgene is the most widely used type which takes up about 60% of the total sales. Polycarbonate (PC) Resin has wide range of applications, such as consumer electronics, construction, automotive, etc., and consumer electronics was the most widely used area which took up about 49% of the global total. APAC is the largest region of Polycarbonate (PC) Resin in the world in the past few years and it will keep increasing in the next few years. APAC market took up about 71.8% the global market. In developed countries, the market concentration is relatively high, but in developing countries, such as China, the market concentration is very low, from 2018 to 2023, there are many small players in China put the PC into production. Covestro, SABIC, Mitsubishi, Lotte Chemical, Teijin Limited, Idemitsu Kosan, etc. are the key suppliers in the global Polycarbonate (PC) Resin market. Top 5 took up about 2/3 of the global market.

The global Polycarbonate Resin market size was estimated at USD 13920.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
