Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Polycarboxylate Superplasticizer Polyether Monomer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Polycarboxylate superplasticizer polyether monomer refers to a monomer with a macromolecular structure used for polymerization during the production of polycarboxylate superplasticizer. It is a high-molecular-weight polyether compound, and the main chain and side chains of polycarboxylate superplasticizer are mainly prepared through the "macromonomer polymerization" process. The industry chain for polyether monomers used in polycarboxylate superplasticizers is well-defined and closely interconnected. Its upstream sector is primarily the petrochemical industry, which provides key raw materials such as ethylene oxide (EO), methyl allyl alcohol, and isopentenyl alcohol. Fluctuations in EO prices have a direct and significant impact on the production costs of these monomers. Further downstream in the industry chain are polycarboxylate superplasticizer manufacturers. Polyether monomers are the primary raw material for the production of high-performance polycarboxylate superplasticizers, accounting for over 80% of the total production cost and quality, and playing a crucial role in the final performance of these agents. Global sales in 2024 are expected to be approximately 3.7 million tons, with an average market price of approximately \$1,100 per ton. Single-line production capacity varies depending on the production process and investment in production equipment, typically ranging from 50,000 to 200,000 tons per year, with industry gross profit margins ranging from 10% to 25%.

The global Polycarboxylate Superplasticizer Polyether Monomer market size was estimated at USD 4070.0 million in 2025 and is projected to grow at a compound annual

growth rate (CAGR) of 4.00% during the forecast period.
