## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Polycrystalline Diamond Blanks competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Global sales of PCD blanks reached 28.57 million pieces in 2024, with an average selling price of US\$39.98 per piece. Polycrystalline diamond (PCD) blanks are core intermediates in the manufacture of superhard tools such as PCD cutting tools and wire drawing dies. Their preparation relies heavily on high-temperature and high-pressure sintering technology, incorporating various raw material ratios and process optimization techniques. Upstream raw materials, including graphite powder, metal catalysts (such as Ni and Co), pyrophyllite powder, dolomite powder, and carbide anvils, account for 60-70% of the total cost. China is the world's primary producer of PCD blanks, with Henan as the core cluster. The country boasts a complete industrial chain and ample production capacity, with a strong export orientation, with India, the United States, and Europe as its primary overseas markets.

The global Polycrystalline Diamond Blanks market size was estimated at USD 1143.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.90% during the forecast period.
