Abstracts

Polycrystalline Diamond Cutting Tool is short for PCD cutting tool. Polycrystalline Diamond (PCD) is a synthetic diamond product that is produced by sintering together selected diamond particles with a metal matrix, using sophisticated technology. The diamond and matrix, when sintered together under high temperatures and pressures, creates a PCD tool blank that is high in uniform hardness and is abrasive resistant in all directions. This PCD diamond layer is then bonded to a tungsten carbide substrate, which provides strength and a brazable base to permit bonding to other metals. Global key players of polycrystalline diamond cutting tool include Sandvik Group, Sumitomo Electric, Kennametal, Ceratizit, Beijing Worldia Diamond Tools, etc. The top five players hold a share about 45%. Asia-Pacific is the largest market, and has a share about 40%, followed by Europe and North America with share 30% and 23%, separately. In terms of product type, PCD Turning Tools is the largest segment, occupied for a share of 30%. In terms of application, Automotive Industry has a share about 47 percent.
