Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Polycyclic Aromatic Hydrocarbons competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Polycyclic aromatic hydrocarbons (PAHs) are a class of organic compounds composed of multiple fused aromatic rings made up of carbon and hydrogen atoms. Although polycyclic aromatic hydrocarbons (PAHs) are primarily regulated as environmental pollutants, certain PAHs with specific structures are still widely used in various industrial applications. These include intermediates for dyes and pigments, pharmaceutical and pesticide synthesis, high-temperature lubricants, monomers for engineering plastics, organic electronic materials, and research standards. Due to their excellent thermal stability and electrical properties, PAHs also have value in the development of functional materials and high-performance carbon-based materials. However, their use is typically subject to strict regulation due to their potential toxicity and environmental risks. In 2024, global polycyclic aromatic hydrocarbons production reached approximately 48 kilotons, with an average global market price of around US\$ 3212 per ton.

The global Polycyclic Aromatic Hydrocarbons market size was estimated at USD 154.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.20% during the forecast period.
