Abstracts

Poly(DL lactide) (PDLLA) is a synthetic, biodegradable, and biocompatible polymer belonging to the aliphatic polyester family, specifically a racemic copolymer synthesized from D- and L-lactic acid monomers. It is characterized by its amorphous structure, which results in a relatively rapid and predictable degradation profile through hydrolysis into lactic acid, a naturally occurring metabolite in the human body. PDLLA is widely utilized in biomedical applications such as resorbable sutures, drug delivery systems, tissue engineering scaffolds, and orthopedic fixation devices due to its tunable mechanical properties, lack of crystallinity, and excellent biocompatibility, making it suitable for temporary medical implants that gradually absorb without requiring surgical removal.

The global Poly(DI Lactide) (Pdlla) market size was estimated at USD 184.35 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
