## Abstracts

Polyester artificial bone repair material is a polyester-based synthetic biomaterial that is widely used in orthopedics, oral surgery, spinal surgery and other fields to repair fractures, bone defects and promote bone tissue regeneration. Due to its good biocompatibility, degradability and moderate mechanical strength, polyester artificial bone material can effectively combine with human bone tissue, provide necessary structural support and be gradually absorbed by the body during bone healing, thus avoiding the secondary surgical removal required for traditional metal implants.

The global Polyester Artificial Bone Repair Material market size was estimated at USD 1611.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.60% during the forecast period.
