## Abstracts

Polyester-based high-temperature coating is a coating designed for use in high-temperature environments with polyester resin as the main component. It has excellent high-temperature resistance and can usually withstand high temperatures of 200°C to 250°C. Some special formulas can even withstand higher temperatures. In addition to high-temperature resistance, polyester-based coatings also have good oxidation resistance, corrosion resistance, strong adhesion and chemical stability, enabling them to protect metal and other substrate surfaces from damage under extreme temperature conditions. In addition, this coating also has a certain degree of UV resistance and is suitable for applications exposed to sunlight for a long time.

The global Polyester Based High Temperature Coatings market size was estimated at USD 383.16 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
