Abstracts

Polyester masterbatch is made by mixing polyester resin with different coloring agents (such as dyes and pigments), uniformly dispersing them together, and extruding them at high temperature. It is an additive used for coloring polyester and related materials. Polyester masterbatch is mainly used in the textile industry to manufacture colored polyester fibers and is suitable for various textile equipment in polyester production. Polyester masterbatch plays a coloring role in the textile process. Mix the polyester masterbatch with the raw resin in a ratio of 1:10 and 1:50 (the specific polyester masterbatch depends on the fiber specifications and user requirements), and mix them evenly by simple stirring (without the need for any additives) to achieve the desired colored product.

The global Polyester Masterbatch market size was estimated at USD 1526.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
