Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Polyester Suiting Fabrics competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Polyester Suiting Fabrics production reached approximately 63,615 K meters, with an average global market price of around US\$ 39 per meter. Polyester Suiting Fabrics refer to a category of synthetic textile materials specifically engineered for crafting men's and women's suits, with polyester (a polymer derived from petroleum-based ethylene glycol and terephthalic acid) as their primary fiber component—often blended with natural fibers like wool, cotton, or silk, or other synthetics like spandex, to balance performance and aesthetic properties. Unlike pure natural suiting fabrics, polyester-based options are valued for their inherent functional advantages: they exhibit strong wrinkle resistance, excellent durability, and low maintenance.

The global Polyester Suiting Fabrics market size was estimated at USD 2481.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
