Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Poly(ethylene-co-propylene) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Poly(ethylene-co-propylene), also known as ethylene-propylene rubber (EPR or EPM), is a type of copolymer composed of ethylene and propylene monomers. It is a member of the elastomer family, known for its excellent resistance to heat, oxidation, ozone, and weathering. The polymer has a saturated backbone, which makes it chemically stable and suitable for long-term outdoor and high-temperature applications. It is non-polar, offering good electrical insulating properties and resistance to polar solvents and chemicals. When a third monomer such as diene is added, it becomes EPDM (ethylene propylene diene monomer), allowing for vulcanization. Poly(ethylene-co-propylene) is widely used in automotive weather seals, insulation for wires and cables, roofing membranes, and various industrial applications.

The global Poly(ethylene-co-propylene) market size was estimated at USD 4248.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
