Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Polyethylene Compatibilizers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Polyethylene compatibilizers are functional polymer additives used to improve the interfacial adhesion between polyethylene (PE) and other immiscible polymers or fillers in blends and composites. Typically based on PE backbones grafted or copolymerized with reactive groups such as maleic anhydride or glycidyl methacrylate, these compatibilizers enable chemical interaction with polar materials like polyamide, EVOH, or inorganic fillers. By reducing interfacial tension and enhancing dispersion, they significantly improve mechanical strength, thermal stability, and barrier properties. Polyethylene compatibilizers are essential in applications such as multilayer packaging films, recycled plastic blends, fiber-reinforced composites, and automotive components. The key market drivers for polyethylene compatibilizers include the growing demand for high-performance polymer blends and composites in packaging, automotive, construction, and consumer goods industries. The rise in multilayer flexible packaging, which often combines PE with barrier materials like EVOH or PA, necessitates compatibilizers to ensure structural integrity and performance. Additionally, the global push toward sustainability and circular economy practices is fueling demand for compatibilizers in plastic recycling, where they enable the blending of incompatible polymers from mixed waste streams. Innovations in lightweight materials for automotive and industrial applications also drive the use of PE-based composites reinforced with fillers, further boosting the need for effective compatibilizers.

The global Polyethylene Compatibilizers market size was estimated at USD 1089.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of

5.80% during the forecast period.
