## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Polyethylene Glycol 400 Dioleate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Polyethylene glycol 400 dioleate is a diester nonionic surfactant/solubilizer and lubricant derived from the esterification of polyethylene glycol (PEG-400) with oleic acid. The molecule contains both a hydrophilic PEG segment and a long-chain unsaturated fatty acid hydrophobic tail, exhibiting excellent emulsifying, dispersing, plasticizing, and lubricating properties. The upstream products of polyethylene glycol 400 dioleate are primarily ethylene oxide and oleic acid. Ethylene oxide is produced from ethylene, while oleic acid is a type of fatty acid. Midstream manufacturers convert upstream raw materials into products through processes such as esterification. Global sales in 2024 were expected to be approximately 60,000 tons, with an average market price of approximately US\$1,700 per ton. Single-line production capacity varies depending on the production process and investment in production equipment, typically ranging from 500 to 3,000 tons per year, with industry gross profit margins ranging from 15% to 30%.

The global Polyethylene Glycol 400 Dioleate market size was estimated at USD 102.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
