## Abstracts

A polyethylene pot is also referred to as a seedling pot or plastic pot. Made from soft, lightweight material, they are easy to handle and can be safely stacked in large quantities. Reusable and cost-effective, they are a more affordable option compared to pots made from other materials. Sometimes, they are used as disposable items to prevent disease transmission between plants. Polyethylene pots are primarily used for the temporary growth of vegetable and flower seedlings. The phase between sowing and seedling emergence is critical, as direct sowing in open fields often leads to suboptimal growth due to environmental factors. Leafy greens, for instance, are vulnerable to animal predation on their young shoots. Moreover, direct outdoor planting is challenging, especially when germination rates are low. Polyethylene pots facilitate the growth of robust seedlings that can be harvested relatively quickly.

The global Polyethylene Pot market size was estimated at USD 2470.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
