Abstracts

Polyethylene silage film is a specialized agricultural plastic sheeting manufactured from polyethylene resins, typically low-density polyethylene (LDPE) or linear low-density polyethylene (LLDPE), often enhanced with additives such as UV stabilizers, anti-fog agents, and oxygen barriers to improve durability and performance. It is used primarily in the agricultural sector for wrapping and preserving silage?fermented fodder stored as animal feed?by creating an anaerobic environment that prevents spoilage, maintains nutritional quality, and extends storage life. The film is available in various forms, including stretch wrap, sheet, and tube, and is characterized by its tensile strength, puncture resistance, and ability to adhere tightly to silage bales or pits, ensuring an airtight seal critical for effective fermentation and minimizing dry matter losses.

The global Polyethylene Silage Film market size was estimated at USD 988.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.67% during the forecast period.
