Abstracts

Polyglycerol esters of fatty acids (PGEs) are used in food as an emulsifier. PGEs are a class of synthetic, nonionic surfactant frequently used in food, pharmaceutical, and cosmetic industries on account of their amphiphilic properties. The hydrophilic part of these amphiphiles consists of oligomeric esters of glycerol, and the hydrophobic part consists of alkyl chains of varying length and degree of unsaturation. The major players in global Polyglycerol Esters of Fatty Acid market include Lonza, Dupont, Sakamoto Yakuhin Kogyo, etc. The top 3 players occupy about 35% shares of the global market. Europe and Japan are main markets, they occupy about 55% of the global market. The global polyglycerol esters of fatty acids (PGEFA) market is experiencing steady growth, primarily driven by their diverse applications across the food and beverage, cosmetic, and pharmaceutical industries. PGEFAs are used as emulsifiers, stabilizers, and surfactants due to their excellent performance in enhancing the texture and consistency of products. In the food industry, they are valued for their ability to improve the stability of emulsions and foams, making them essential in the production of baked goods, dairy products, and processed foods. The increasing demand for processed and convenience foods, along with growing consumer preference for high-quality and stable products, is contributing to the market's expansion. In the cosmetic and personal care sectors, polyglycerol esters of fatty acids are utilized for their moisturizing and emulsifying properties. They are commonly found in skincare, haircare, and personal hygiene products, where they help to enhance product texture and performance. The rising awareness of natural and mild ingredients in personal care products is driving demand for PGEFA, as they are derived from renewable sources and are considered to be more skin-friendly compared to synthetic alternatives. This trend towards natural and sustainable ingredients is supporting the growth of the PGEFA market in the cosmetic industry. However, the market faces challenges related to the fluctuations in raw material prices and potential regulatory changes. The cost of fatty acids and glycerol, which are

key raw materials for producing PGEFA, can impact production costs and pricing. Additionally, evolving regulations and standards concerning food additives and cosmetic ingredients may affect market dynamics. Despite these challenges, the ongoing research and development efforts to improve PGEFA formulations and expand their applications are likely to drive future growth. The market is expected to continue expanding as industries seek versatile, effective, and sustainable ingredients for a wide range of products.

The global Polyglycerol Esters of Fatty Acid market size was estimated at USD 223.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
