Abstracts

Polygonum Multiflorum Thunb, known as Fo-Ti or He Shou Wu in traditional medicine systems, is a perennial herb native to East Asia, primarily valued for its roots which are processed and used in various forms such as raw, processed, or wine-steamed preparations depending on intended therapeutic applications; it is traditionally reputed to support liver and kidney health, promote longevity, darken hair, and enhance vitality, with active compounds including anthraquinones, stilbenes (e.g., resveratrol), and phospholipids contributing to its purported antioxidant, anti-aging, and adaptogenic properties, though its use is subject to regional regulations due to potential hepatotoxicity risks with improper preparation or dosage. The market for Polygonum Multiflorum Thunb is primarily driven by demand in traditional Chinese medicine (TCM), Ayurveda, and growing interest in natural and herbal supplements globally, with key producing regions including China, Korea, and Japan, and expanding cultivation in areas with suitable climates; supply chains involve wild harvesting?though sustainability concerns are prompting increased cultivation?followed by processing, quality testing (often for heavy metals and adulterants), and distribution through herbalists, specialty retailers, online platforms, and as an ingredient in nutraceutical and cosmetic formulations targeting anti-aging, hair care, and wellness segments. Market growth is influenced by factors such as rising consumer awareness of traditional medicine, aging populations seeking natural health solutions, and scientific research validating certain bioactivities, though it faces challenges including regulatory scrutiny (e.g., bans or restrictions in some Western countries due to safety issues), need for standardization, and competition from other adaptogenic herbs, with future trends likely focusing on clinical evidence generation, improved extraction technologies, and sustainable sourcing to meet quality and safety standards in international markets.

The global Polygonum Multiflorum Thunb market size was estimated at USD 350.25

million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
