Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Polyguanidine Polymers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Polyguanidine polymers are a class of cationic macromolecules composed of repeating guanidine functional groups. These polymers exhibit strong antimicrobial and antiviral properties due to their positive charge, which interacts with and disrupts negatively charged microbial membranes. A notable example is polyhexamethylene guanidine (PHMG), which has been used in water treatment, surface disinfection, and personal care products. Their effectiveness, chemical stability, and broad-spectrum activity make them suitable for use in textiles, coatings, medical materials, and industrial sanitizers. However, safety concerns and regulatory scrutiny exist due to toxicity risks associated with prolonged or excessive exposure. Polyguanidine polymers, such as polyhexamethylene guanidine (PHMG) and polyaminopropyl biguanide (PAPB), typically appear as colorless to pale yellow liquids or white powders and have molecular weights ranging from 2,000 to 50,000 Da. They are highly soluble in water, exhibit strong cationic charge density, and are effective as broad-spectrum antimicrobials with minimum inhibitory concentrations (MIC) as low as 1?10 ppm. Aqueous solutions generally have a pH between 5.0 and 7.0, and active ingredient content ranges from 20% to 40% in commercial formulations. These polymers are thermally stable up to around 120°C and offer a shelf life of 12 to 24 months under proper storage conditions. Their high efficacy against bacteria, fungi, and viruses makes them suitable for use in disinfectants, textile coatings, and personal care products.

The global Polyguanidine Polymers market size was estimated at USD 480.0 million in

2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
