## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Polyisocyanate Prepolymers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Polyisocyanate prepolymers are reactive intermediates formed by the partial reaction of polyisocyanates (compounds containing two or more isocyanate groups,  $\text{-NCO}$ ) with polyols or other active hydrogen-containing compounds. These prepolymers have residual free isocyanate groups and are commonly used as curing agents or building blocks in polyurethane systems. The prepolymerization process improves handling, viscosity control, and reactivity during processing. Depending on their chemical structure (aliphatic, aromatic, or cycloaliphatic isocyanates), polyisocyanate prepolymers offer tailored performance such as UV stability, elasticity, adhesion, and chemical resistance, making them widely used in coatings, adhesives, sealants, elastomers (CASE), and rigid or flexible foams.

The global Polyisocyanate Prepolymers market size was estimated at USD 3174.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
