Abstracts

Polymer antistatic agents are a type of chemical additives that are added to polymers or coated on the surface of plastic products and synthetic fibers to prevent the electrostatic hazards of polymer materials. Its main function is to reduce the resistivity of the surface of polymer materials with high volume resistivity to a certain extent, thereby reducing the accumulation of static electricity in polymer materials during processing and use. In recent years, the global antistatic agent market has continued to expand. This growth is mainly due to the rapid development of industries such as packaging, electronics and textiles. The Chinese antistatic agent market is also showing a rapid growth trend. This growth rate is higher than the global average, mainly due to the rapid development of China's electronics, textiles and other industries. As an important chemical additive, polymer antistatic agents play an important role in many fields. With the rapid development of related industries, its market size will continue to expand.

The global Polymer Antistatic Agent market size was estimated at USD 596.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.20% during the forecast period.
