## Abstracts

Polymer bonded NdFeB magnets are composite materials consisting of neodymium-iron-boron magnetic powder embedded within a polymer matrix, typically a thermoplastic or thermoset resin, which are then processed via injection molding, compression molding, or extrusion to form net-shape or near-net-shape magnets with complex geometries, dimensional precision, and isotropic magnetic properties, offering advantages such as corrosion resistance without additional coatings, reduced weight, design flexibility, and cost-effectiveness in high-volume production, though they generally exhibit lower magnetic energy product (BHmax) and operating temperature limits compared to their sintered counterparts, making them suitable for applications requiring intricate shapes, tight tolerances, and moderate magnetic performance, such as sensors, small motors, consumer electronics, automotive components, and medical devices.

The global Polymer Bonded Ndfb Magnets market size was estimated at USD 1050.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
