Abstracts

Azelaic acid is a crystalline, opaque-white solid, soluble in hot water, alcohols, diethyl ether, and other polar solvents. The two carboxyl groups of azelaic acid limit its solubility in nonpolar solvents such as naphtha or carbon tetrachloride. It is a 9-carbon, straight chain, saturated, dibasic acid mainly produced commercially by the ozone oxidation of oleic acid. It is chemical raw material used in the production of plastics, lubricants, electronics, pharmaceuticals & cosmetics, etc. The azelaic acid market is driven by its wide-ranging applications in skincare and pharmaceuticals due to its effectiveness in treating various skin conditions and acne. It also finds use in agricultural applications as a growth-promoting agent for crops. However, a significant challenge in this market is the need for regulatory approvals and quality control, especially in the pharmaceutical and cosmetic sectors. Ensuring consistent product quality and adhering to regulatory standards can be a complex process, potentially delaying product launches and market entry. Additionally, competition from alternative ingredients and the demand for more natural and sustainable options pose challenges to the growth of the azelaic acid market.

The global Polymer Grade Azelaic Acid market size was estimated at USD 200.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
