Abstracts

Polymer lithium-ion batteries, also known as lithium polymer or LiPo batteries, are a type of rechargeable battery that utilizes a polymer electrolyte rather than a liquid one, which allows for greater flexibility in shape, reduced weight, and improved safety due to reduced risk of leakage. These batteries operate on the same fundamental principles as traditional lithium-ion cells but incorporate a gel-like or solid polymer matrix that enables thinner, more customizable form factors, making them particularly suitable for applications where space and design constraints are critical. They offer high energy density, good discharge characteristics, and are commonly used in consumer electronics, wearable devices, drones, electric vehicles, and portable medical equipment.

The global Polymer Lithium Ion Battery market size was estimated at USD 31500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 18.50% during the forecast period.
