Abstracts

Polymer modified cement mortar is a mortar material made by adding modifiers such as polymers or polymer emulsions to traditional cement mortar. The modification enhances the adhesion, flexibility, crack resistance and water resistance of the mortar, making it perform better and have a longer service life during construction. Polymer modified cement mortar is widely used in building exterior walls, floors, roofs and other areas where durability and impermeability need to be improved. It is suitable for repair, plastering and waterproofing under various environmental conditions. Its modified characteristics make the mortar have strong anti-freeze, anti-aging and wear resistance, which can effectively improve the overall performance of the building.

The global Polymer Modified Cement Mortar market size was estimated at USD 18320.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
