Abstracts

The neurovascular stent retrievers are employed for thrombectomy and restoration of the blood flow in the acute embolic stroke. The increase in the elderly population, the increasing incidence of neurological and epidemic diseases, and the launch of new neurovascular stent retriever products are driving the development of the neurovascular stent retriever industry. Systemic thrombolysis with tissue plasminogen activator is effective in treating stroke, but other therapies have limited efficacy in severe stroke with thromboembolic occlusion. Stent retrievers have recently been added to mechanical thrombectomy in patients with acute embolic stroke. Neurovascular stent retrievers are used for mechanical thrombectomy and blood flow restoration in the setting of acute embolic stroke. The ability of neurovascular stent retrievers to quickly restore blood flow and effectively remove clots or thrombi in deep intracranial arteries makes it a driving demand in the neurovascular stent retrievers market.

The global Polymer Neurovascular Stent Retrievers market size was estimated at USD 233.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
