## Abstracts

Polymer sensor is a functional sensor that introduces small molecule sensors into polymer structures, and uses the special properties of polymer materials and the interaction between substances and polymers to detect parameters such as substance concentration, temperature, and pressure. The core part of the polymer sensor is the sensing layer, which is mainly composed of polymer materials. When the target substance enters, it will interact with the polymer and generate a signal output, thereby realizing the detection of the target substance.

The global Polymer Sensor market size was estimated at USD 987.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.90% during the forecast period.
