Report Overview:

Polymers have been observed to be susceptible to various detrimental environmental impacts such as oxidation, cross-linking reactions, chain scission and other unrestrained reactions which hamper their desirable properties and reduce their quality. They also get worn out due to the direct impact of ultraviolet light and heat. Polymer stabilizers play an important role here to mitigate these undesirable effects on polymers. Polymer stabilizers are directly applied or through various combinations so as to prevent the above mentioned undesirable effects, by rendering polymers stability to tackle oxidation, impacts of light, heat as well as play the role of an anti-ozonant. The effectiveness of polymer stabilizers in the case of tackling weathering effects is a function of solubility, their ability to stabilize in various polymer matrices & their distribution in these matrices, and the extent of loss of polymer stabilizer quantities during processing and usage, through the process of evaporation.

The Global Polymer Stabilizers Market Size was estimated at USD 6386.51 million in 2023 and is projected to reach USD 7850.65 million by 2029, exhibiting a CAGR of 3.50% during the forecast period.
