Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Polymer Surge Arresters competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Polymer Surge Arrester production reached approximately 31000 k units?with an average global market price of around US\$ 50 per unit, a single-line production capacity of approximately 100,000 units/year, and a gross profit margin of approximately 23%. Polymer Surge Arrester is a type of overvoltage protection device used in electrical power systems to protect equipment such as transformers, switchgear, and transmission lines from transient overvoltages caused by lightning strikes or switching operations. Unlike traditional porcelain arresters, polymer surge arresters use a silicone rubber or polymer housing, which offers superior lightweight structure, hydrophobicity, pollution resistance, and mechanical strength. Structurally, it consists of a metal oxide varistor (MOV) block as the core element, enclosed within a polymeric insulating sheath and equipped with metal end fittings. When an overvoltage occurs, the arrester conducts the excess surge current safely to the ground, thereby limiting the voltage across the protected equipment. Once the transient passes, it quickly returns to its insulating state. The Polymer Surge Arrester market is experiencing continuous growth, driven by the global expansion of power transmission and distribution networks, renewable energy integration, and increasing emphasis on electrical system reliability. These arresters are widely adopted as replacements for traditional porcelain types due to their lightweight design, high mechanical strength, superior pollution resistance, and enhanced safety performance. Technological advancements?such as improvements in metal oxide varistor (MOV) technology, polymer insulation materials, and modular construction?are enhancing product durability, thermal stability, and surge-handling capability. The market is also supported

by ongoing urbanization and smart grid development, which increase the demand for compact and maintenance-free protection devices. Overall, polymer surge arresters have become essential components in modern electrical infrastructure, particularly in medium- and high-voltage applications, ensuring equipment protection and system stability under diverse environmental conditions.

The global Polymer Surge Arresters market size was estimated at USD 1551.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
