## Abstracts

Polymer water-soluble packages, also known as water-soluble films or pouches, are packaging materials made from polymers that dissolve or disintegrate in water. These packages are designed to be easily and completely soluble when they come into contact with water, leaving no residue or waste behind. The polymers used in water-soluble packages are typically cellulose-based, such as polyvinyl alcohol (PVOH) or a modified form of PVOH. These polymers have excellent water solubility, making them an ideal choice for creating packaging materials that can dissolve quickly and completely in water. The global polymer water-soluble packaging market has been experiencing significant growth and is expected to continue expanding due to increasing environmental concerns, stringent regulations on single-use plastics, and a growing focus on sustainable packaging solutions.
