Abstracts

A stent is a medical device which is inserted into the internal duct of the body for expanding the blood vessels and preventing the vessels from blockage. Bioabsorbable stents, also known as bioresorbable stents or naturally-dissolving stents, are made up of materials that get absorbed in the body and act by expanding the vessels or internal duct for clearing the blockage caused due to the deposition of plaque. These devices are designed in such a way that after eluting the drug, the stents gets dissolved within the body at certain interval of time. Research is still conducted on polymeric stent materials for the development of the novel bioabsorbable stents, which possess low risk for restenosis and late-stent thrombosis. Increase in geriatric population, rise in prevalence of cardiovascular disease, surge in percutaneous coronary intervention (PCI) procedure, and rise in adaptation of bioabsorbable stent by patients and physicians are the key factors that drive the growth of the global bioabsorbable stents market. In addition advancement in technology in stents, growth in demand for minimally invasive procedures, and increase in initiative taken by government for development & production of bioabsorbable stents propel the growth of the market.

The global Polymeric Bioabsorbable Stents market size was estimated at USD 126.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.90% during the forecast period.
