## Abstracts

Geomembranes are protective films that function as a barrier in outdoor, man-made containment areas. Geomembranes are applied over soil to keep water and other liquids from penetrating into and out of the soil surrounding the containment area. Typical geomembrane applications include waste water storage, agricultural and decorative ponds, recreational lakes, canal linings, and tunnel membranes, landfill sites, waterproofing of artificial waterways, pool and pond liners. The predominant plastics used as geomembranes are polyolefins and PVC. The most important performance requirement for geomembranes is the retention of mechanical properties for extremely long periods of time. Global Geomembranes key players include GSE Holding, Firestone, AGRU, Solmax, etc. Global top four manufacturers hold a share over 25%. Asia-Pacific is the largest market, with a share over 35%, followed by Europe, and North America, both have a share about 45 percent. In terms of product, Thermoplastic Geomembranes is the largest segment, with a share nearly 85%. And in terms of application, the largest application is Waste Management, followed by Building and Construction, Water Management, Mining, etc.

The global Geomembranes market size was estimated at USD 2832.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
