Abstracts

Polymeric hydrolysis stabilizer is an additive used in polymer materials, designed to prevent or slow down the hydrolytic degradation of polymers in moist environments. Unlike monomeric hydrolysis stabilizers, polymeric hydrolysis stabilizers exist in polymeric form, usually as high molecular weight compounds. They interact with or chemically bond to the polymer matrix, providing more durable protection against hydrolysis within the polymer structure. These stabilizers are particularly effective in enhancing the durability of plastics, coatings, fibers, and other polymer materials, especially in applications requiring long-term exposure to humid or aqueous environments.

The global Polymeric Hydrolysis Stabilizer market size was estimated at USD 174.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.60% during the forecast period.
