Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Polymeric Hyperdispersant competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Polymer hyperdispersants are a class of high-molecular-weight polymer-based dispersing agents that form a stable adsorption layer on the surface of solid particles or liquid droplets, preventing particle agglomeration and significantly improving the dispersion and long-term stability of the system. Compared with traditional small-molecule dispersants, they offer stronger steric hindrance and more durable dispersion. Global production in 2024 was expected to be approximately 100,000 tons, with an average selling price of US\$24,300 per ton.

The global Polymeric Hyperdispersant market size was estimated at USD 2438.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
