Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Polymeric Surge Arrester for Distribution Networks competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Polymeric Surge Arrester for Distribution Networks production reached approximately 31000 k units?with an average global market price of around US\$ 50 per unit, a single-line production capacity of approximately 100,000 units/year, and a gross profit margin of approximately 23%. Polymeric Surge Arrester for Distribution Networks is a type of overvoltage protection device used in electrical power systems to protect equipment such as transformers, switchgear, and transmission lines from transient overvoltages caused by lightning strikes or switching operations. Unlike traditional porcelain arresters, polymer surge arresters use a silicone rubber or polymer housing, which offers superior lightweight structure, hydrophobicity, pollution resistance, and mechanical strength. Structurally, it consists of a metal oxide varistor (MOV) block as the core element, enclosed within a polymeric insulating sheath and equipped with metal end fittings. When an overvoltage occurs, the arrester conducts the excess surge current safely to the ground, thereby limiting the voltage across the protected equipment. Once the transient passes, it quickly returns to its insulating state.

The global Polymeric Surge Arrester for Distribution Networks market size was estimated at USD 1551.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
