## Abstracts

Polymethacrylimide foam, PMI foam, is a rigid closed cell foaming material, which has the characteristics of light weight, high strength, high temperature resistance, chemical corrosion resistance, radiation resistance, etc. PMI foam has been widely used in aerospace, medical equipment, sports equipment, radar antenna, rail transit, automobile lightweight, unmanned aerial vehicle, wind power generation and other fields due to its excellent comprehensive performance. The preparation process of PMI foam mainly includes low-temperature bulk polymerization and high-temperature foaming, reactive extrusion foaming, etc. In the aerospace field, PMI foam is commonly used as sandwich materials for aircraft structures, such as wing leading edge, rudder, landing gear door, wing body and wing tip fairing. In addition, PMI foam is also used to manufacture helicopter blades, which can improve the service life of blades and reduce manufacturing costs. PMI foam is widely used as the core material in various types of helicopter blades. Through the molding and curing process, PMI foam can provide the required strength and stiffness, while reducing the weight of blades and improving flight efficiency. PMI foam can be used for some structural parts of aircraft, such as radome, cabin bulkhead, etc. In radome, PMI foam has extremely low dielectric constant and dielectric loss, which is suitable for manufacturing components that need to transmit and receive signals. Meanwhile, its high mechanical performance and excellent impact resistance can ensure that the components are not easily damaged after being impacted. PMI foam can also be used for aircraft interior parts, such as seats, bulkheads, etc. Its lightweight characteristics help reduce aircraft weight and improve fuel efficiency. At the same time, PMI foam also has good sound insulation and shock absorption performance, which can improve the comfort of passengers.

The global Polymethacrylimide (PMI) Foam for Aerospace market size was estimated at USD 96.0 million in 2025 and is projected to grow at a compound annual growth rate

(CAGR) of 8.20% during the forecast period.
