Abstracts

Polyolefin extruded tubes are cylindrical hollow profiles manufactured through an extrusion process using polyolefin polymers, primarily polyethylene (PE) and polypropylene (PP), which are melted and forced through a die to form continuous lengths of tubing with consistent cross-sectional dimensions. These tubes are valued for their chemical resistance, flexibility, durability, lightweight nature, and electrical insulation properties, making them suitable for a wide range of applications including fluid transport, electrical and mechanical protection, medical devices, packaging, and automotive components.
