## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Polyphenol Antioxidant competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Polyphenol Antioxidants are naturally occurring compounds found in plants that possess strong free-radical-scavenging and anti-inflammatory properties, helping to prevent oxidative damage in food, cosmetics, and pharmaceuticals. Structurally, they are characterized by multiple phenolic hydroxyl groups, which enable them to neutralize reactive oxygen species (ROS) and chelate metal ions. Common sources include green tea catechins, grape seed extract, resveratrol, curcumin, and flavonoids from fruits and vegetables. The supply chain begins upstream with agricultural cultivation of polyphenol-rich plants, followed by extraction and purification using solvent extraction, membrane filtration, and spray-drying processes by nutraceutical and chemical processors. Midstream companies further formulate these antioxidants into powders, capsules, or liquid concentrates for functional foods, dietary supplements, and skincare formulations. Downstream sectors include food preservation, pharmaceuticals, cosmetics, and nutraceuticals industries, where polyphenol antioxidants are incorporated into products to enhance stability, prevent oxidation, and promote health benefits. In 2024, global Polyphenol Antioxidant production reached about 125,000 tons with a capacity of 160,000 tons, priced at USD 12,000-38,000 per ton depending on purity and source, while maintaining an average gross margin of 39%.

The global Polyphenol Antioxidant market size was estimated at USD 2847.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
