Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Polyphenylene Sulfide Cast Film competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the output of polyphenylene sulfide cast film reached 12,755 tons, with an average selling price of US\$33,489 per ton. The annual production capacity of a single-line polyphenylene sulfide cast film is approximately 1,500 tons, with a gross profit margin of approximately 24.25%. Polyphenylene sulfide cast film refers to a film material made with polyphenylene sulfide (PPS) resin as the matrix through a casting process (usually coating, extrusion casting or stretch casting). Because PPS has excellent high temperature resistance, chemical resistance and dimensional stability, it is widely used as a film material in scenarios with high requirements for environmental stability and thermal performance. The upstream raw materials of polyphenylene sulfide cast film include PPS (polyphenylene sulfide) and other basic materials such as epoxy/aromatic polymer matrices with high thermal stability, fluorinated fillers, and surface modifiers. The midstream is the polyphenylene sulfide cast film manufacturer, and the downstream is mainly in the fields of batteries, communications, and aerospace.

The global Polyphenylene Sulfide Cast Film market size was estimated at USD 427.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
