Abstracts

A polypropylene capacitor is a type of film capacitor that uses polypropylene film as the dielectric material, known for its high insulation resistance, low dielectric loss, and excellent stability over a wide range of temperatures and frequencies. These capacitors are widely used in applications requiring precise and reliable performance, such as in AC circuits, power supplies, motor run applications, audio systems, and filtering circuits, due to their low dissipation factor, self-healing properties, and ability to handle high surge currents. They are particularly valued in industries where minimal signal distortion and long-term reliability are critical, including industrial electronics, automotive systems, renewable energy installations, and consumer electronics.

The global Polypropylene Capacitor market size was estimated at USD 182.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
