Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Polypropylene Insulated Power Cable competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Polypropylene insulated power cables are power transmission cables using polypropylene (PP) as the conductor insulation layer. They offer excellent electrical insulation, heat resistance, and mechanical strength. Compared to traditional cross-linked polyethylene (XLPE) cables, PP material allows for higher operating temperatures (up to 105°C), higher current carrying capacity, and more environmentally friendly recyclability. Without the need for complex cross-linking processes, PP cables are suitable for medium and low voltage distribution systems and are a new environmentally friendly cable technology driving the development of green, low-carbon power grids in recent years. In 2024, the global production of polypropylene insulated power cables will reach 20,977.5 kilometers, with an average selling price of US\$20 per meter, a single-line production capacity of 500 kilometers, and a gross profit margin of 22%. The upstream industries of polypropylene insulated power cables mainly include polypropylene (PP) raw material production, additives (such as antioxidants, anti-UV agents) suppliers, and conductor material (copper, aluminum) smelting and processing companies. The raw material costs and technical performance directly affect the quality and economy of the cables; the midstream is cable manufacturing companies, which are responsible for formula research and development, insulation extrusion, cabling and sheath processing, and promote the industrialization of environmentally friendly, high-temperature resistant polypropylene cables; the downstream is widely used in medium and low voltage power distribution fields such as urban power grid transformation, new energy power stations (photovoltaic, wind power), rail transit, and data centers. Benefiting from the "dual carbon" goals and the construction of new power systems,

downstream demand continues to grow, driving the entire industry chain to upgrade towards green, efficient, and high-capacity directions.

The global Polypropylene Insulated Power Cable market size was estimated at USD 420.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.80% during the forecast period.
