Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Polypropylene (PP) Insulated Cable competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Polypropylene insulated cable is a type of cable that uses polypropylene (PP) as the insulation material. Polypropylene is a thermoplastic polymer with excellent electrical and mechanical properties, widely used in the field of power transmission and distribution. The main market drivers include: Policy promotion and energy transformation Global carbon reduction targets: The EU's "Fit for 55" plan requires power grid upgrades, and the annual growth rate of PP insulated cable demand exceeds 10%. China's "new infrastructure": UHV and charging pile construction are accelerating, driving the expansion of the high-voltage cable market. Technological progress and cost optimization Material modification technology: Nanofillers and cross-linking processes are used to increase the temperature resistance of PP to 150°C, broadening the application scenarios. Scaled production: Zhongtian Technology and other companies have achieved 10,000-ton production capacity, and the cost is 15%-20% lower than XLPE cables. New energy and electric vehicle explosion Offshore wind power installed capacity: 50GW globally in 2025, driving the demand for high-voltage DC cables. New energy vehicle penetration rate: China's 2025 target exceeds 20%, and the popularization of 800V high-voltage platforms drives the upgrade of wiring harnesses. Environmental regulations and safety standards EU CPR regulations: require cable combustion performance to reach B2 or above, and PP halogen-free flame retardant technology becomes mainstream. China's "Dual Carbon" Policy: Restricting the production of halogen-containing cables and accelerating the replacement of PP insulation materials. Smart grid and digital demand Power Internet of Things: PP insulated cables integrate sensors to achieve real-time monitoring of temperature and

stress and improve the level of grid intelligence. The polypropylene insulated cable market is undergoing a leap from "traditional substitution" to "high-end leadership", with energy transformation, technological breakthroughs and environmental protection needs forming a resonance. Enterprises need to focus on incremental markets such as high-voltage direct current and new energy vehicles, and seize the strategic high ground of global energy interconnection and low-carbon economy through material innovation and intelligent manufacturing.

The global Polypropylene (PP) Insulated Cable market size was estimated at USD 679.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
